

Check the [Tutorial](#) tab to know learn about division operators.

Task

The provided code stub reads two integers, *a* and *b*, from STDIN.

Add logic to print two lines. The first line should contain the result of integer division, *a* // *b*. The second line should contain the result of float division, *a* / *b*.

No rounding or formatting is necessary.

Example

*a* = 3

*b* = 5

- The result of the integer division *3* // *5* = 0.
- The result of the float division is *3* / *5* = 0.6.

Print:

0

0.6

Input Format

The first line contains the first integer, *a*.

The second line contains the second integer, *b*.

Output Format

Print the two lines as described above.

Sample Input 0

4

3

Sample Output 0

Language

Python 3

```
1  if __name__ == '__main__':
2      a = int(input())
3      b = int(input())
4
5  print(a//b,a/b,sep='\n')
6
```

Line: 6 Col: 1
